PROFESSIONAL SUMMARY

Detail-driven B.E. Computer Science (Big Data Analytics) graduate with a proven ability to turn complex, messy data into clear business insights — backed by two published, peer-reviewed research papers (IEEE Xplore, Scopus-indexed) and five hands-on analytics projects spanning fraud detection, legal-document AI, and supply chain optimization. Proficient in Python, SQL, Power BI, and machine learning, with experience across the full analytics lifecycle — data cleaning, EDA, predictive modeling, and dashboard design — that has surfaced measurable business impact, including \$2.71M in identified unsold inventory and ~72% in potential cost savings. Combines strong technical rigor with clear, stakeholder-ready communication and is eager to bring this foundation to a first full-time role in data analytics.

CORE SKILLS

Programming & Query Languages: Python, SQL

Data Analytics & Methods: Exploratory Data Analysis (EDA), Data Cleaning, Statistical Analysis, ETL, Feature Engineering, Regression Analysis, Predictive Modeling, KPI Reporting, Dashboard Design

Machine Learning: XGBoost, Random Forest, Anomaly Detection, scikit-learn, SMOTE (Class Imbalance Handling)

Databases: MySQL, PostgreSQL, SQLite

BI & Visualization: Power BI (DAX), Tableau, Microsoft Excel, Google Looker Studio

Tools & Platforms: Jupyter Notebook, Streamlit, Git/GitHub, Neo4j, FAISS, LangChain

RESEARCH PUBLICATIONS

Credit Card Fraud Detection Using Machine Learning

IEEE Xplore — Published

- Co-authored and published a peer-reviewed IEEE paper on ML-driven fraud detection, applying XGBoost, Random Forest, and anomaly detection models to real-world transaction data, with SMOTE used to resolve severe class imbalance.
- Achieved strong ROC-AUC performance through an end-to-end pipeline covering preprocessing, feature scaling, and comparative model evaluation across Precision, Recall, and F1-score.

Graph-RAG for Legal Contract Analysis

Computer Science Journal — Scopus-Indexed

- Designed and built a Graph-RAG (Retrieval-Augmented Generation) pipeline using Neo4j, FAISS vector search, LangChain, and Gemini LLM to enable multi-hop reasoning and explainable clause retrieval across legal contracts.
- Benchmarked the system against traditional Vector-RAG on the CUAD dataset (510 contracts), achieving Precision@5 of 0.76 and Recall@5 of 0.88 — a measurable improvement in retrieval accuracy.

PROJECTS

Supply Chain Optimizer

Python, Streamlit, SQLite, scikit-learn

- Built a real-time supply chain analytics dashboard to monitor shipment ETAs, logistics trends, and demand forecasts across multi-source operational data.
- Architected an end-to-end data pipeline backed by a SQLite warehouse and scikit-learn forecasting models, including a live What-If simulator for scenario-based decision support.

Supply Chain Analytics & Vendor Optimization Dashboard

Python, SQL, Power BI

- Built an end-to-end analytics solution to evaluate vendor performance and inventory efficiency across the supply chain.
- Identified \$2.71M in unsold inventory and a 65% vendor dependency risk, and uncovered an estimated 72% in cost-reduction opportunities through bulk purchasing analysis.
- Designed interactive, KPI-driven dashboards that enabled data-driven decision-making for inventory and procurement teams.

Superstore Sales Insights Dashboard

SQL, Python, Power BI, DAX

- Analyzed multi-year sales data using SQL and Python to identify revenue trends, seasonality, and growth patterns.
- Performed data cleaning and EDA, then built interactive Power BI dashboards using DAX measures to track key business KPIs.
- Delivered actionable insights that supported data-driven decision-making for sales strategy.

EDUCATION

B.E. Computer Science (Big Data Analytics)

2022 – 2026

Chandigarh University, Mohali, India | CGPA: 7.38

CERTIFICATIONS

Google Data Analytics Professional Certificate • Microsoft Azure Data Fundamentals • Google AI Essentials • Microsoft Power BI Data Analyst • Google Project Management Professional Certificate
